

COVID-19 VACCINE TEAM

COVID-19 Vaccine Team Available to Assist at Facilities Across the Country

The release of the first COVID-19 vaccines has many facilities scrambling to find qualified providers to assist with the management and administration of these vaccines.

UltraCare has created a COVID-19 Vaccine Team comprised of experienced nursing and medical professionals, from our vast network of regional and national providers, to assist our partner facilities quickly and efficiently.

UltraCare is currently deploying COVID-19 Vaccine Teams to provide this much-needed service to elder care and long-term care facilities in several states.

- The COVID-19 Vaccine Team will verify lot numbers, administer the injections, verify site injection and complete the required documentation for the program.
- All operations are performed through a central command post, enabling us to rapidly deploy providers when vaccines are made available to your facility.
- The command center will simplify communications between your facilities and our firm.
- UltraCare will handle insurance, travel arrangements and provider testing.
- The COVID-19 Vaccine team can be deployed to meet both short-term and long-term needs.

Our mobilization team will reach out to you within 24 hours. In most cases, we have been able to deploy a team to your location quickly.
